

VOLUNTRACK · PITCH OVERVIEW

A calmer way to track volunteer hours.

VolunTrack is a privacy-first PWA for students and clubs to log service hours, set goals, earn badges, and export reports — without an account server.

React 18 · Vite

PWA · offline-first

localStorage only

Open source

Why it exists

Students lose hours to lost sign-in sheets, fragile spreadsheets, and school portals they can't access after graduation. VolunTrack keeps the record portable, the proof attached, and the friction low.

LIVE hriday21223.github.io/VolunteerTrack**REPO** github.com/Hriday21223/VolunteerTrack

Today, tracking volunteer hours is painful.

Students juggle five tools to do one job — and lose hours to the cracks between them.

1**Sign-in sheets get lost**

Paper sign-ins disappear in backpacks. Supervisors misfile emails. Hours vanish.

2**Spreadsheets are fragile**

Manual totals, broken formulas, and no proof of work when colleges ask.

3**School portals lock you out**

Once you graduate, the records you need are owned by someone else's system.

4**Notifications live in 4 apps**

Reminder emails, group chats, calendars, and notebooks all carry fragments.

THE COST

Hours that are real but unprovable are hours a college application never gets to use.

One app. Five jobs. No account server.

VolunTrack replaces the spreadsheet, the reminder email, and the certificate generator — all on the student's own device.

LOG

Smart hour logging

Activity, time, location, supervisor, and proof in one form. Paste a sentence and the agent drafts the rest.

TRACK

Progress that adds up

Progress ring, weekly chart, and 12 auto-earning badges make consistency visible without nagging.

REMIND

Browser-native nudges

Daily, weekly, monthly, or one-off reminders with built-in browser notifications — no third-party service.

REPORT

Reports in one click

PDF service log, CSV export, and a printable certificate ready for college applications.

OWN

Your data stays yours

Everything lives in localStorage under your account id. Nothing is uploaded; nothing is shared.

The whole loop — log, track, remind, report, own — fits on one screen per step, in roughly a minute per entry.

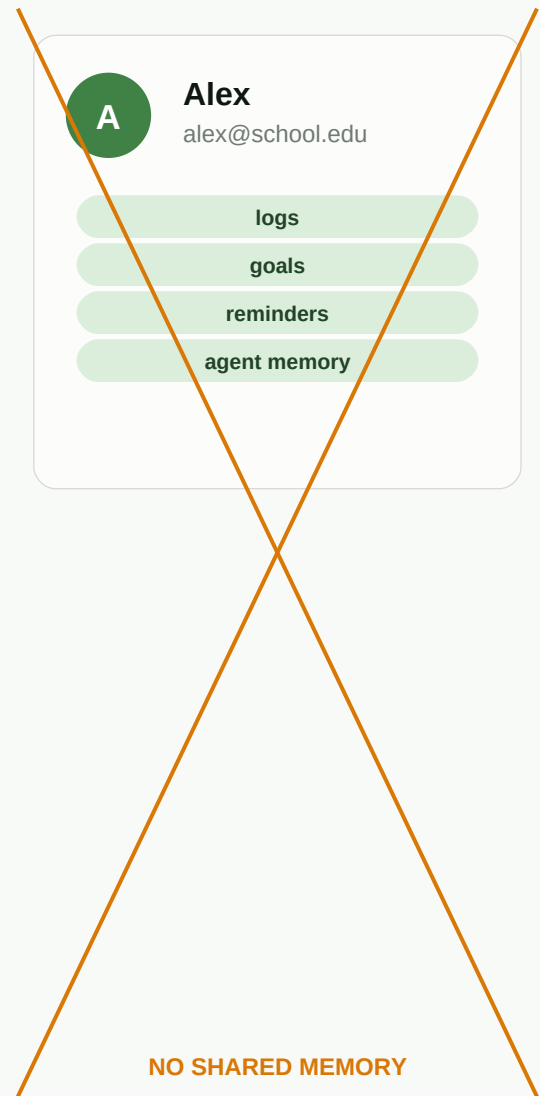

Your hours, your device, your account.

VolunTrack is local-first. The only "account" is a JSON blob on the student's own device — no server, no telemetry on volunteer data.

DATA MODEL · LOCALSTORAGE NAMESPACES

voluntrack:user	Profile, school, grade, avatar
voluntrack:logs	VolunteerLog[] (hours, proof, supervisor)
voluntrack:goals	Goal[] with targetHours + primary flag
voluntrack:achievements	Earned badge IDs
voluntrack:reminders	Reminder[] (daily / weekly / monthly)
voluntrack:theme	Light / dark preference

PER-USER ISOLATION

No shared memory. No cross-user access. The agent only ever reads the signed-in user's localStorage scope.

A stack that just gets out of the way.

React + Vite for speed, Tailwind for visual consistency, jsPDF for exportable reports, date-fns for the calendar. localStorage replaces the database.

LAYER	WHAT WE USE
Frontend	React 18 · React Router 6
Build	Vite 7 with vite-plugin-pwa
Styling	Tailwind CSS 3 (custom brand + earth palettes)
Icons	lucide-react
Dates	date-fns 3
Export	jsPDF + jspdf-autotable
Analytics	@vercel/analytics · @vercel/speed-insights
Persistence	Browser localStorage (no server)
Email	Optional: Express + nodemailer for recovery codes
CI / Deploy	GitHub Actions! · GitHub Pages

DEPLOYMENT

Static SPA on GitHub Pages. PWA-installable on iOS, Android, and desktop. Works offline after the first visit. No secrets, no tokens, no account server to operate.

Where VolunTrack is headed.

From core launch to certificates, premium tools, and paying school partners — the roadmap is already in motion.

PHASE 1

Now

SHIPPED

- ✓ Finish VolunTrack
- ✓ Deploy to GitHub Pages
- ✓ Get first users

PHASE 2

Next

SHIPPED

- ✓ Printable certificates
- ✓ Premium feature hooks
- ✓ Email-based PIN & password reset

PHASE 3

Later

ON TRACK

- ✓ School & organization plans
- ✓ Verified supervisor flow
- ✓ Bulk CSV import

Each phase builds on the previous one. Phase 3 features depend on the verified supervisor flow and the org-wide plan model — both of which are scoped but not started.

What's new in the repo.

A quick look at the most recent shipped work — straight from the commit log.

●	44953da	Add email reset for PIN recovery	LATEST
●	b079c7d	Bump CI to Node 24 (was Node 20)	RECENT
●	7b25e64	Split CI into 3 jobs: lint, build, preview	RECENT
●	f291f15	Add CI workflow	EARLIER
●	9954309	Initial commit: VolunteerTrack	V0.1.0

CI is now Node 24, runs lint + build + preview as separate jobs, and pushes the production build straight to GitHub Pages on every green run.

Try it, fork it, ship it with your students.

VolunTrack is free, open, and already running. Three ways to take the next step.

TRY

Use the live demo

Sign in with any email + password. Data stays on your device. The AI agent drafts a log entry from a single sentence.

hriday21223.github.io/VolunteerTrack

BUILD

Fork the repo

Clone, npm install, npm run dev. PRs welcome. The whole stack is documented in the README.

github.com/Hriday21223/VolunteerTrack

PARTNER

Bring it to your school

Phase 3: verified supervisor flow and org-wide plans. Open an issue to start the conversation.

github.com/Hriday21223/VolunteerTrack

One sentence is all it takes

"Helped at the food bank for 3 hours on Saturday" — the on-device agent drafts the full log entry, and you confirm.
